Deliver AI-powered
endpoint experiences
with Windows

Introduction

Smart business leaders are looking to the future, seeking platforms and tools that not only enhance productivity and flexible work scenarios, but also address security and endpoint management concerns. As AI becomes the norm, not the exception, having tools that enhance and simplify your IT landscape is critical. Giving your team access to AI-powered experiences, no matter where they work, can help drive efficiency, creativity and productivity.

In this eBook you'll learn how to deliver integrated, secure, compliant experiences with Windows while taking advantage of all the innovative Microsoft Copilot solutions available. You'll learn how Copilot respects data boundaries and privacy, makes it easier to manage endpoints and support flexible work and allows you to control when AI rolls out to your organisation. Plus, you'll get practical guidance on getting AI-ready with Windows and learn how to take full advantage of AI capabilities to achieve your business goals.

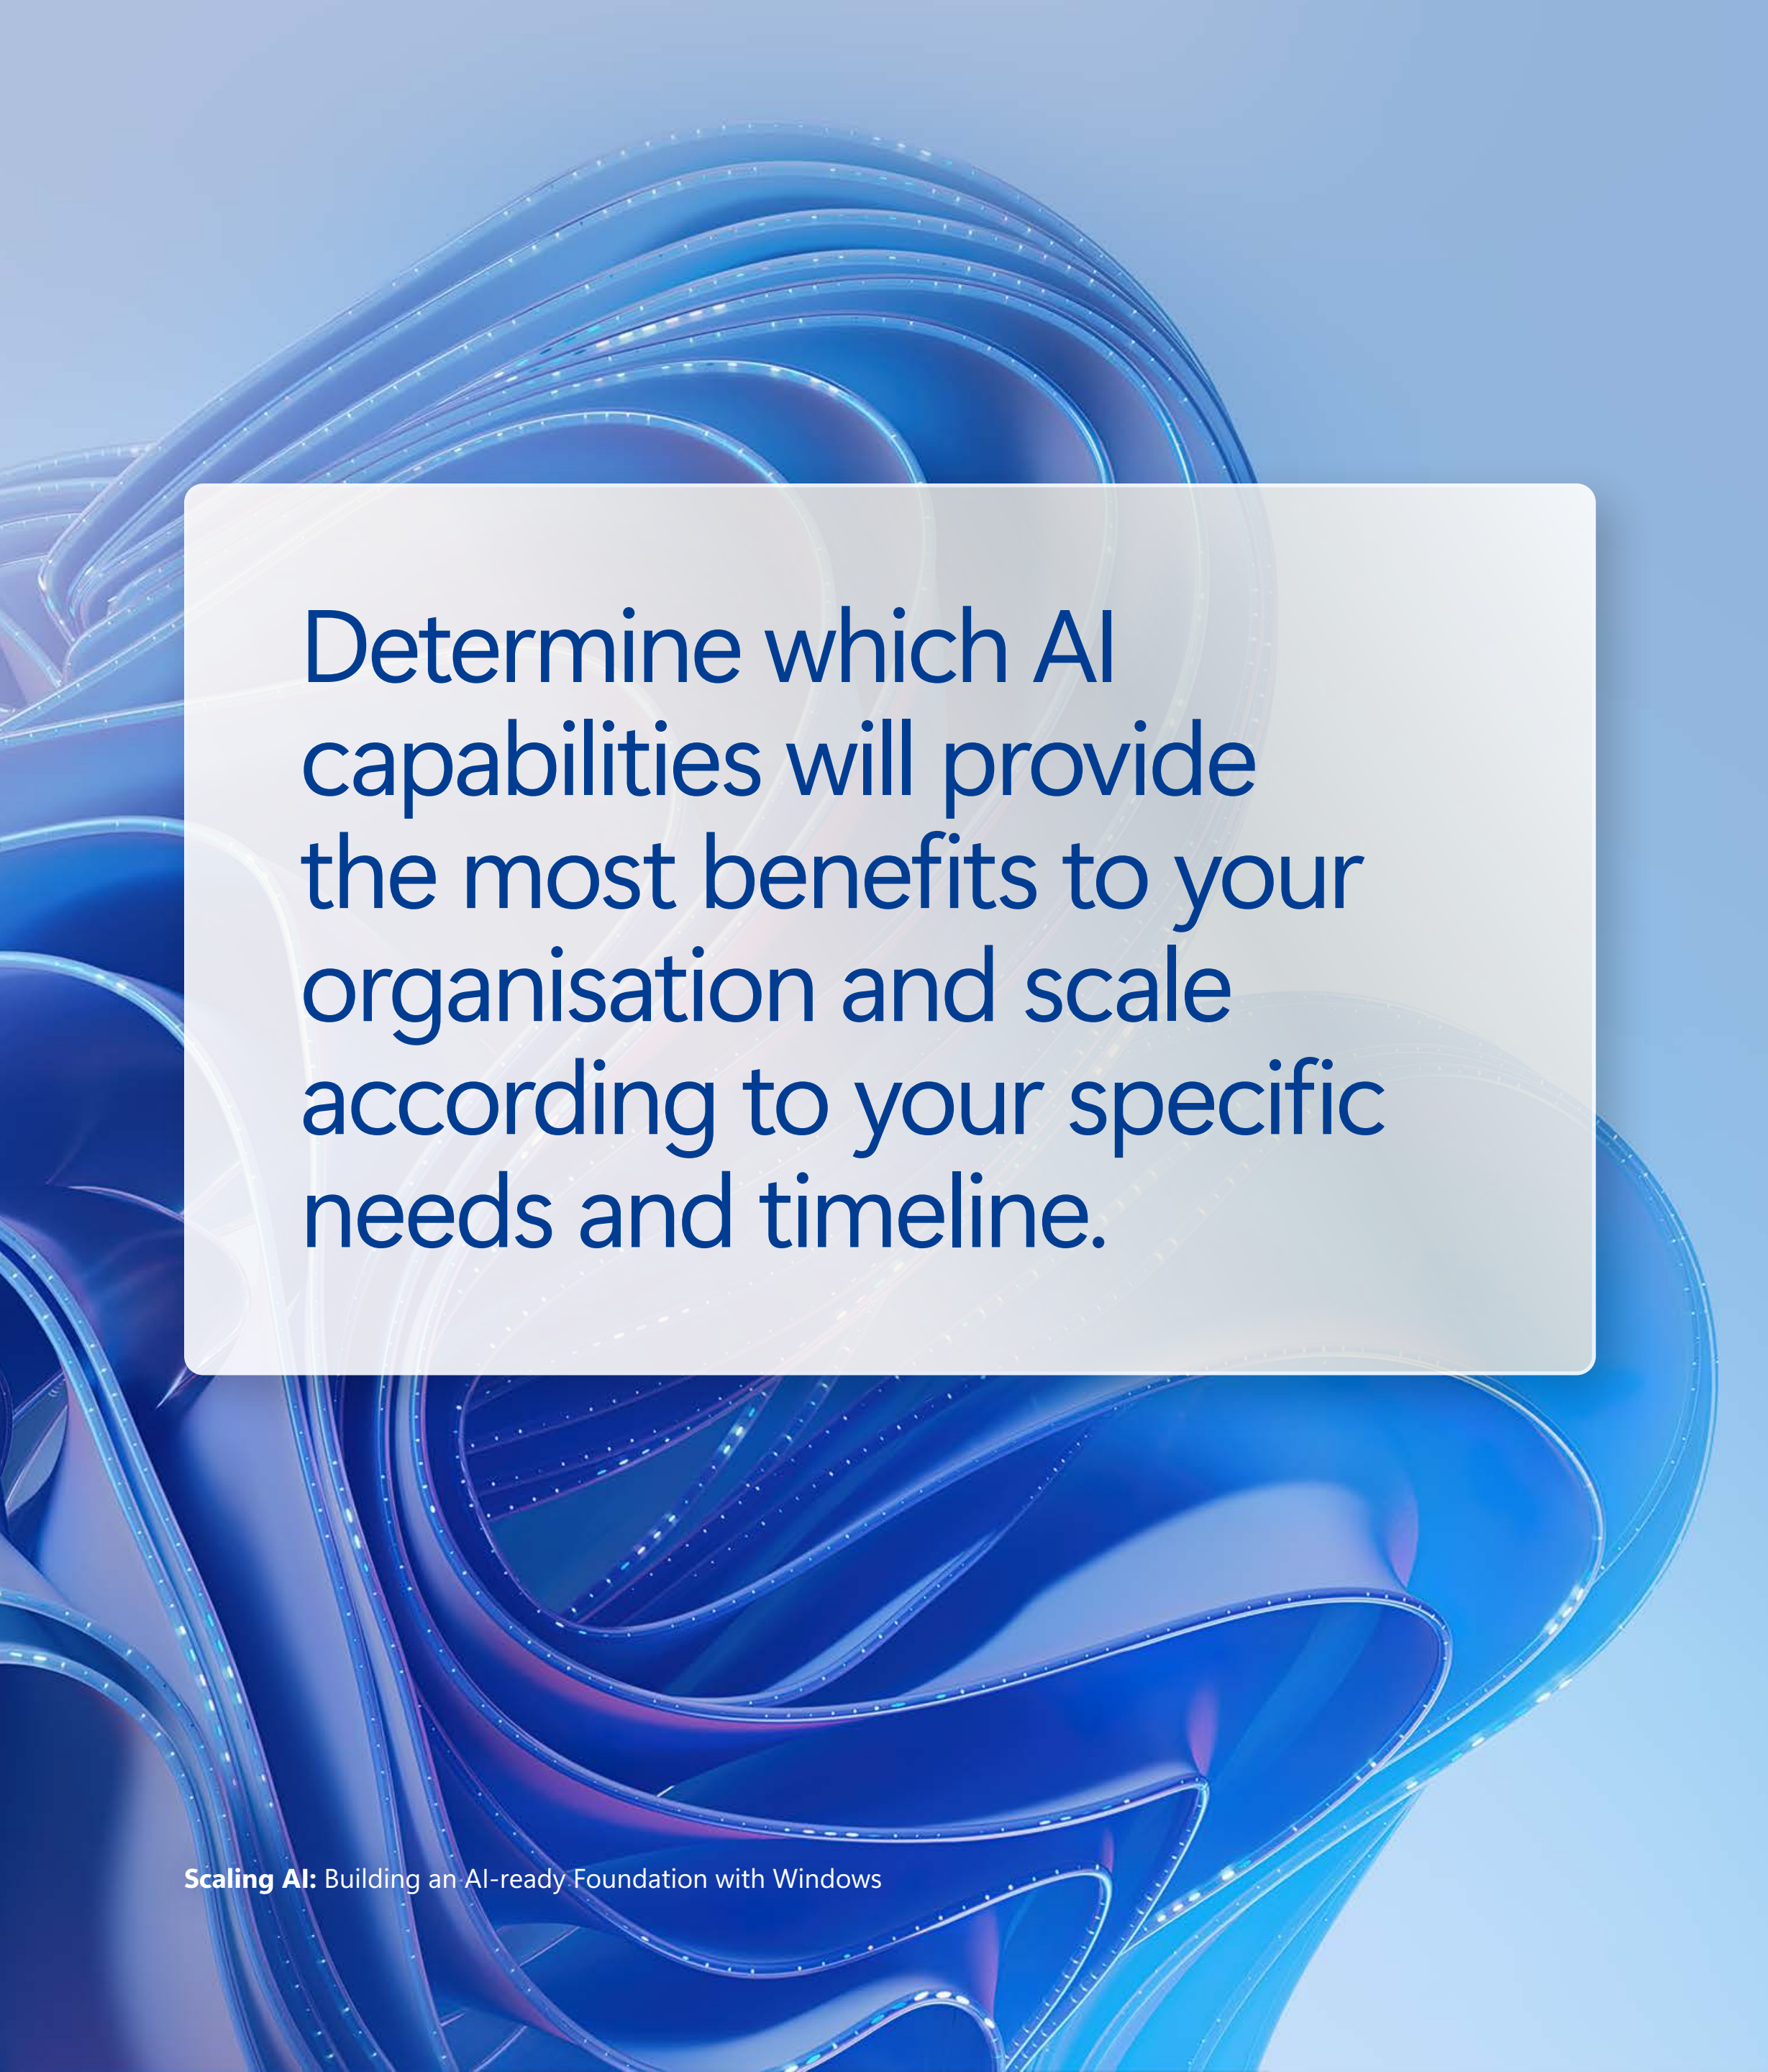

A man with glasses and a white shirt is holding a tablet, and a woman with long brown hair and a yellow shirt is looking at it. They are both smiling. The background is a blurred office space with large windows.

01

Accelerate growth and innovation

Scaling AI now could mean unprecedented future growth and innovation. AI tools can help you stay focused on what matters most and drive impactful business outcomes. It's about working smarter, not harder and making every moment count toward your long-term vision. Here are just some of the ways AI tools in Windows can help your organisation in the short term and pave the way for success in the long term.

Determine which AI capabilities will provide the most benefits to your organisation and scale according to your specific needs and timeline.

Respect data boundaries and privacy

As you incorporate AI into your business, security remains a top priority. Microsoft Copilot and Copilot in Windows are designed to protect customer information. Data is handled according to the Microsoft commitments to privacy, security, compliance and responsible AI practices.

Reduce downtime and avoid expensive helpdesk calls

Easily address your workers' questions about new devices. Use Copilot in Windows to assist with general device set-up such as changing backgrounds, adding peripherals and guiding employees through the usual set-up steps that often lead to helpdesk calls. Since Copilot in Windows is grounded in your work data and also draws information from the web, workers can discover information easily, create and summarise content, control their settings and troubleshoot problems on their own.

Simplify team and device management

Deploy and manage any endpoint from the cloud. Comprehensive analytics and AI help ensure that all tools are optimised for performance and aligned with business goals.

Scale AI for any work scenario

Employees today expect flexibility. Preparing your infrastructure and endpoints for AI capabilities can help you improve productivity and efficiency wherever people are working. Scale AI across your organisation according to your specific needs and timeline with Windows 365, and minimise the cost and complexity typically associated with such endeavours. With Windows 365 Cloud PCs, your team can get started when they're ready, taking advantage of extended AI accessibility across all devices. Easy accessibility and secure, protected data help employees perform at their best, regardless of their location.

02

Work without limits with the cloud

Workplace productivity and efficiency are crucial no matter where your team is or what devices they're working on. Moving to the cloud means you'll spend less time and money on endpoint administration. Plus, it's easier to scale computing resources and AI quickly for all your workers. Windows 365, managed by Intune, helps you keep pace with growth while streamlining your management tasks with a single, cloud-based system. Roll out AI within your organisation on a timeline that works best for you and your team – you're in control.

Use with confidence

Take advantage of Copilot in Windows with the assurance that all your data is protected. Chat data is not saved, and no data is used to train the model. Copilot in Windows and Copilot for Microsoft 365 also keep compliance simple, offering commercial data protection and protection for your IT and endpoint infrastructure.

Enhance productivity and decision making

Work seamlessly across Copilot in Windows and Microsoft Copilot for Microsoft 365 and get access to data from work and the web.

Take advantage of the cloud

Scale AI across teams. With Windows 365, employees can work without limits, gaining instant access to productivity tools and AI-powered experiences on any modern endpoint, whether they're in the office or remote locations. Copilot in Windows acts as an orchestrator across all devices and applications, helping all employees to get the most from AI tools.

Onboard quickly

Transitioning to AI doesn't have to be a lengthy process. By moving to the cloud with Windows 365 and managing efficiently and securely with Microsoft Intune, businesses can significantly shorten the time required to manage and secure their systems.

Simplify, manage and secure your endpoints in the cloud

Easily deploy, manage and secure all your endpoints, both physical and virtual, without increasing your footprint or creating separate workflows. Use AI to streamline task automation, enhance analytics, optimise configuration and policies and gain insights about consumption. Reduce costs and increase efficiency with Windows 365 AI capabilities, such as resizing recommendations, streamlined and consolidated tools and improved support.

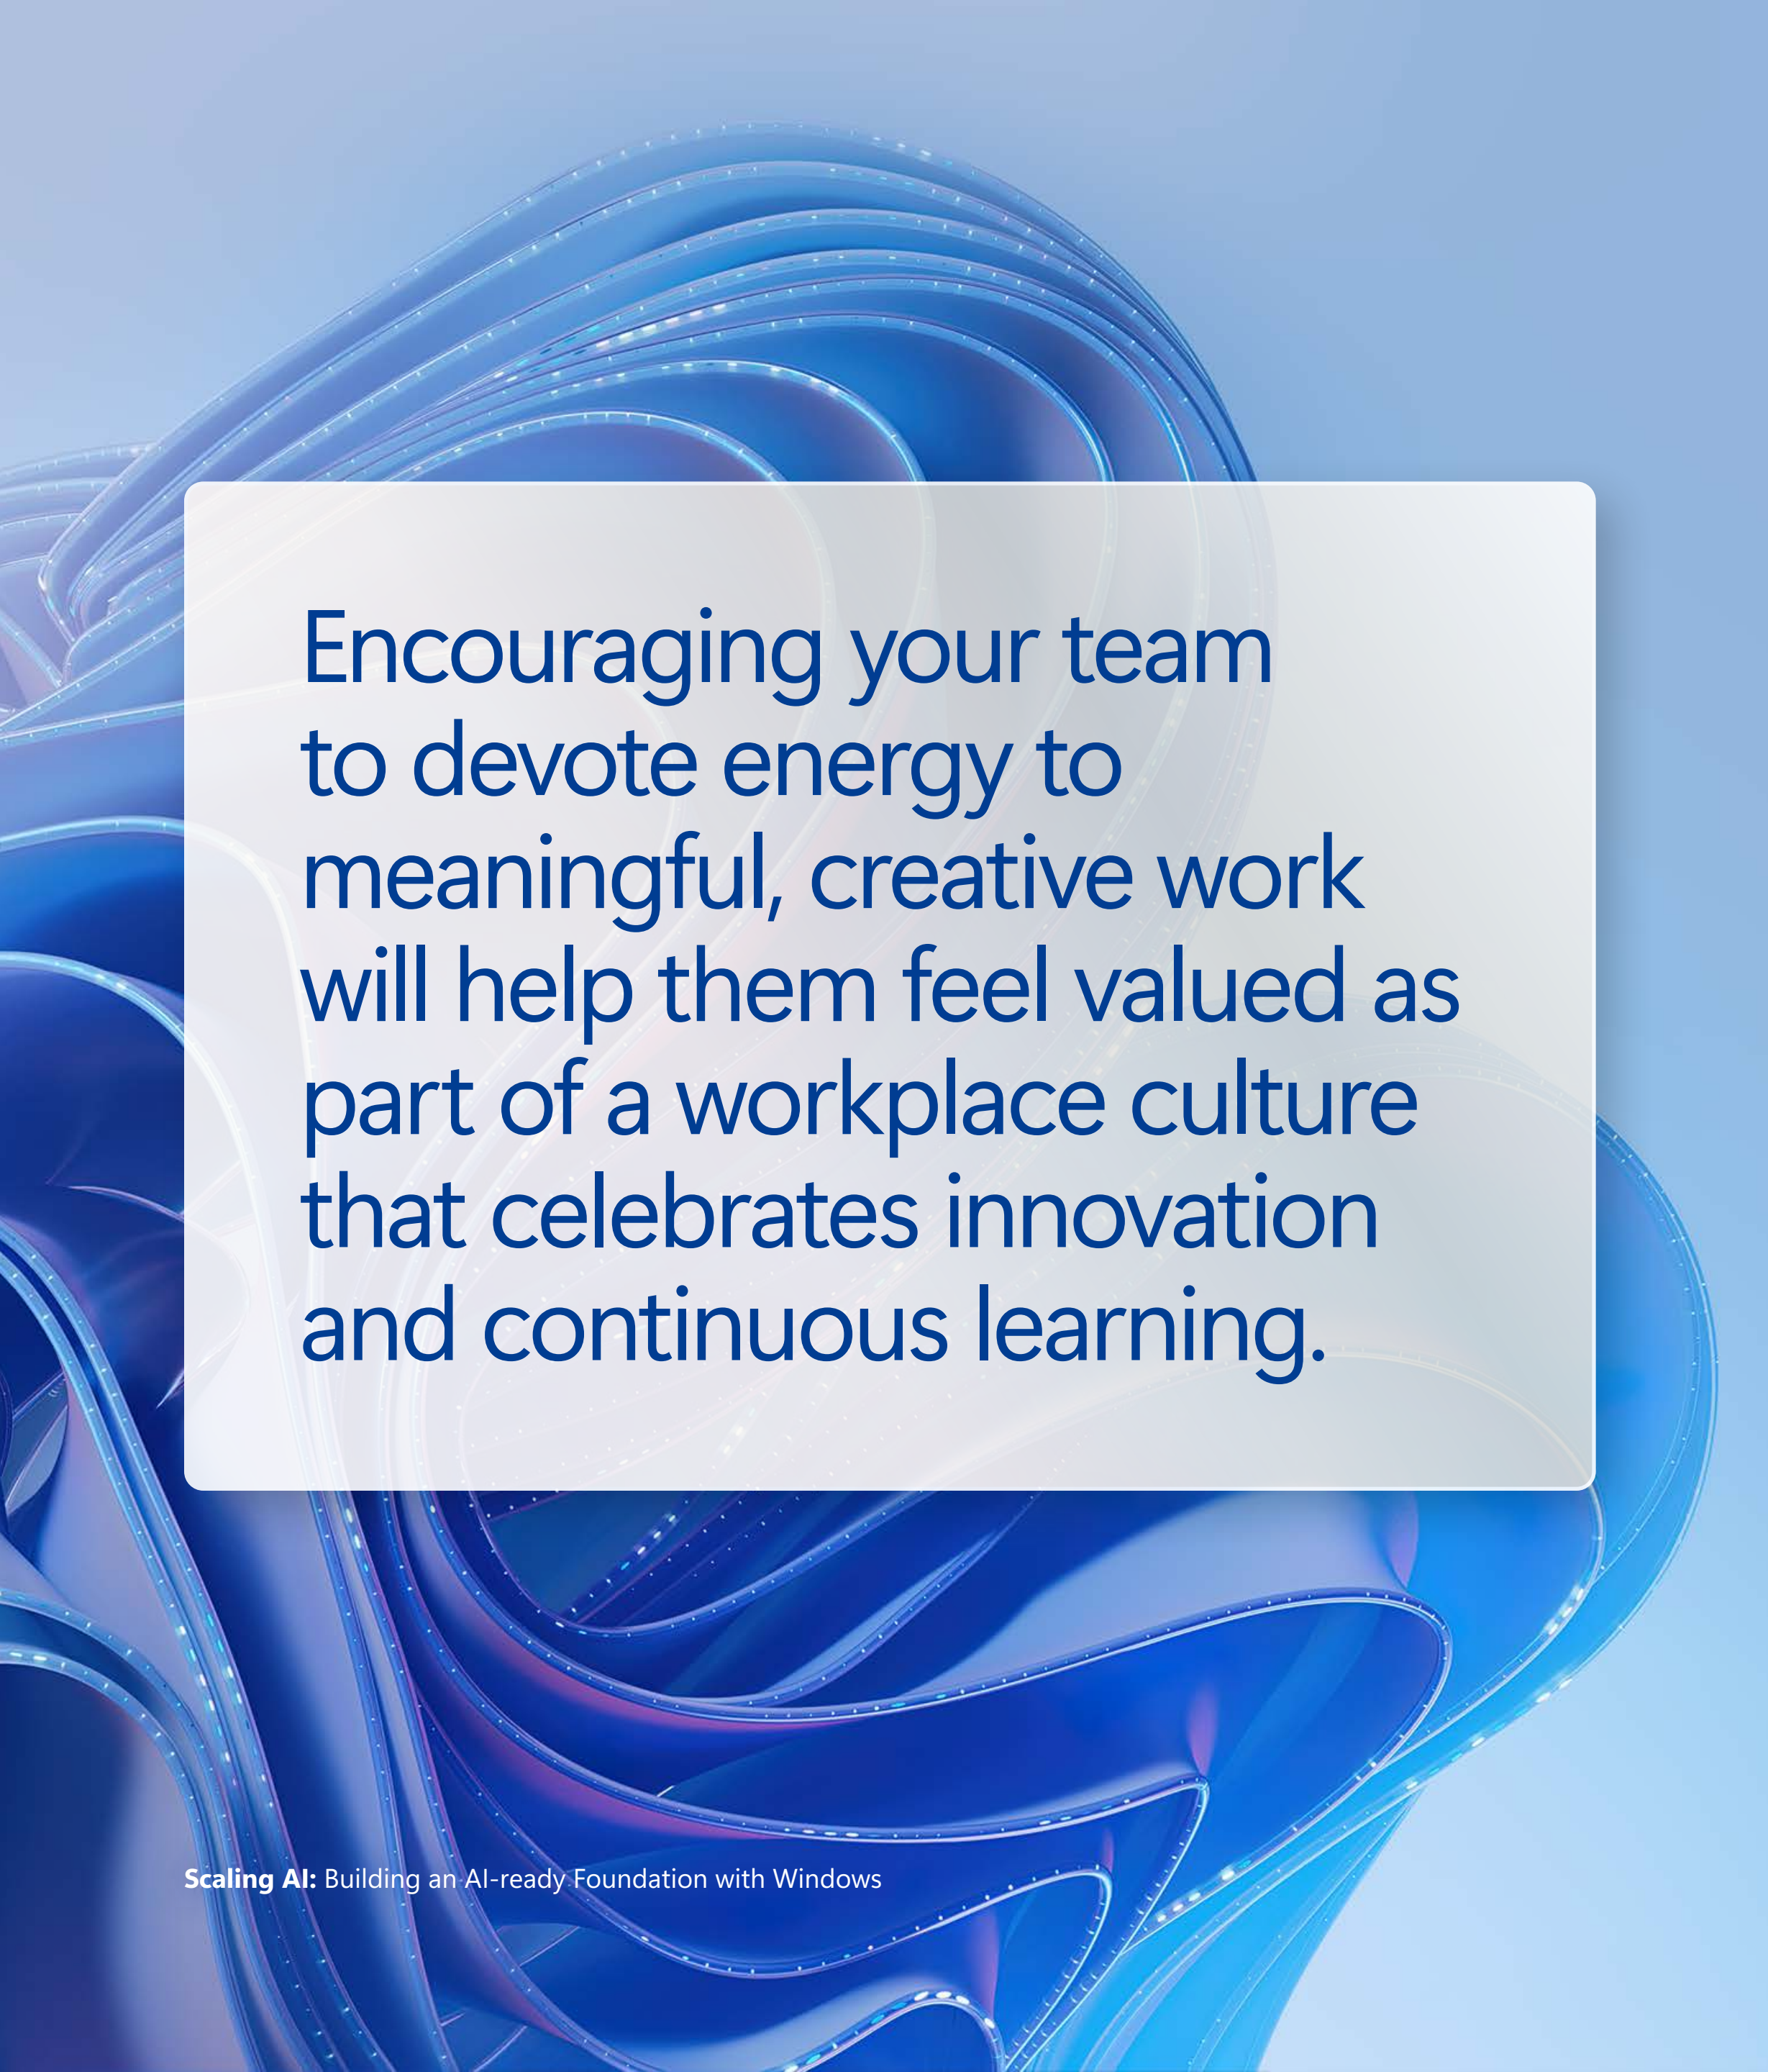

Empower teams and employees with **Microsoft Intune** and **Intune Suite**, a cloud-based endpoint management solution, and keep your organisation's data secure. With Intune, endpoint admins can save time and effort, so all employees have access to the tools and resources they need to work.

03

Innovation with you at the centre

Get an AI experience that aligns with your organisation's needs on every endpoint. Windows scales across the complete end-user computing stack, offering your team the full spectrum of AI capabilities. Drive productivity and efficiency across all levels of your organisation, and foster an environment where innovation and continuous learning are the norm. Empower your employees to work smarter, make informed decisions and focus on meaningful work.

Encouraging your team to devote energy to meaningful, creative work will help them feel valued as part of a workplace culture that celebrates innovation and continuous learning.

Drive productivity and efficiency

Help your team simplify processes and reduce menial labour. AI tools can assist with a range of common workplace tasks:

- **Easier on boarding and offboarding:**
Streamline the transition process for new hires and departing employees.
- **Fast information discovery:**
Simplify decision making by quickly locating and retrieving necessary information and data.
- **Quickly generated drafts and summaries:**
Save time and effort by producing preliminary documents and concise summaries.
- **Simplified helpdesk and IT requests:**
Reduce complexity and response time for technical support queries.

Foster a culture of innovation and continuous learning

Help employees be their best. AI can handle menial tasks and amplify your employees' creativity, boosting job satisfaction and retention. Encouraging your team to devote energy to meaningful, creative work will help them feel valued as part of a workplace culture that celebrates innovation and continuous learning.

Scale AI to any device

Empower your employees with AI capabilities on any device, whether personal or company-issued, with Windows 365 Cloud PCs. This flexibility ensures that every team member has access to the tools they need to excel, regardless of their location or the device they use.

Get time back for leadership

By automating the mundane, IT teams and business leaders can redirect their focus to areas that require their expertise and vision, further advancing strategic initiatives and organisational goals.

Deliver AI-powered endpoint experiences with Windows

An AI-powered solution is no longer a nice-to-have, but a must-have. With Windows 365 Cloud PCs, AI tools are accessible across your organisation, and Copilot integrations in Windows will help drive productivity while maintaining a focus on security, manageability and accessible experiences. Bring together your entire universe of data at work and give your

team what they need to be more productive, creative and efficient.

Learn more about how to take advantage of the full Windows platform and deliver a simple and secure endpoint experience that allows you to scale AI across your organisation.

Empower your workforce with modern endpoints.
